Full Stack Engineer

Full-stack, Back-end focused Developer adept in bringing forth expertise in API design, database management, testing, and maintenance of software systems. Equipped with a diverse and promising skill-set. Proficient in various platforms like Azure, DigitalOcean, AWS, Netlify and GCP, languages like TypeScript, Go, Python, and development tools/frameworks like React, GraphQL, and Prisma. Able to effectively self-manage during independent projects, as well as collaborate as part of a productive team.

EXPERIENCE

Jun 21 – Aug 21
FULL TIME

Mentorship 2021 - Mentee

Hyperledger, Linux Foundation

- Curated a Global Collection of Learning Resources in DLT/ Blockchain.
- Initiated an interactive Knowledge Graph collective of learning resources in DLT.
- Optimised queries for interacting with neo4j, a Graph Database.
- Experimented with a web crawler in Go (colly), to crawl for resources.
- More details Linked here (Mentorship Project Page).

NEXTJS / Neo4j / ReactJS / Go / Python

2018 – 2021
PART TIME

Full-Stack Developer

Freelance Experience

- Designed, Developed and Deployed a News summarizer app on Playstore for a startup incubation.
- Developed an anime Merch Shopfront for a acquaintance, boosting their popularity and unique user count by 10k.
- Created a Grocery stock checker for a local store, increasing their staff efficiency by about 40 percent.
- Designed and Developed a dashboard App for an IoT vendor for their in development experimental prototype.

Flutter / ReactJS / Tailwind CSS / NodeJS / Django / Redux

PROJECTS

SIDE PROJECT

DeFi Application

Github Link

Deposit ERC20 tokens to the smart contract and mint Farm Tokens In this project build a DeFi Application with Solidity where users can deposit an ERC20 token to the smart contract and it will mint and transfer Farm Tokens to them. The users can later withdraw their ERC20 tokens by burning their Farm Token on smart contract and the ERC20 tokens will be transferred back to them.

JavaScript / Solidity / Ganache / Truffle / OpenZeppelin EC Contracts

SIDE PROJECT

DAO Proposal Project(Basic)

Github Link

Quickly initiate a DAO by sending an array of address in the constructor of this contract on deploy. DAO proposals can be created by anyone, but only voted on by members. Members can create proposals to add or kick members. Members cannot withdraw their deposited funds once they are deposited. All deposited funds will be used for the good of the DAO.

JavaScript / Solidity / ReactJS / HardHat / Jest / GraphQL / Web3

SIDE PROJECT

Project Hunt

Github Link

It is a place for people to showcase their projects and discover projects by peers. Unlike a website like Product Hunt for example, the focus is not on how unique or how viable (business wise) the product is, but on how well the project is made as far as technicalities and design goes. A growing segment of the developer/designer/product market is looking for people with past projects having been made. A portfolio site where projects can be showcased, and also where great projects can be discovered can help foster this community.

TypeScript / PostgreSQL / NestJS / TypeORM / RxJx

SIDE PROJECT

Simplified NFT App

Github Link

An Opensea clone NFT marketplace where users mint ERC721 implemented NFTs on Ethereum.

JavaScript / Solidity / ReactJS / HardHat / Web3 / ERC721

SIDE PROJECT

Go Blog Go

Github Link

A RESTful Blog API created using Golang implementing all the basic CRUD features. Implemented JWT Authentication. Learnt more details about working with architectural patterns like MVC

Implemented testing methods.
Go / PostgreSQL / Docker

SKILLS

Nodejs Truffle Ethereum Solidity Web3 Go
Nestjs ReactJs GraphQL TypeScript PYTHON
Git SQL NoSQL WASM
